METHOD, EQUIPMENT, AND MATERIAL FOR CREATING A SURFACE
ON A METAL

Abstract

5 The invention relates to a method for surface
treating the surface of a metal. The surface treatment
is performed in a surfacing chamber, using a surfacing
material, which is formed of one or more compounds and
possible additives, and in which
- the surfacing material is brought to a principally
10 gaseous state,
- the surfacing material is led to the chamber, and
- the surfacing material is permitted to react with the
metal surface being treated. The metal surface being
treated is subjected in the chamber to a passing flow of
15 the surfacing material, and in which the said surfacing
material comprises compounds arising in dry distillation
of deciduous-wood. The invention also relates to the
equipment and surfacing material used in the method.
